«SOLUTIONS FOR YOUR HOME TECHNOLOGY»

Slow Computer or Laptop?

- If you are experience results of slow latency on your computer or laptop, you could be showing signs of imminent hardware failure or a virus.
- Getting your system diagnosed is the first step to determine its analysis and performance.
- Perhaps you may have spyware or malware or a virus causing this latency?
- Maybe you need an upgrade in memory (RAM).
- Most older hard drives are slow. Maybe a faster hard drive & more storage?
- Does your PC contain a lot of dust or seems to run hotter/louder than normal?
- Let me analyze your system for you to determine a proper analysis.
